EDUCATION

University of Central Florida
Computer Science, Master of Science

Orlando, Florida
Jan. 2026 – Dec 2027

University of Central Florida (GPA: 3.7/4.0)
Computer Science, Bachelor of Science

Orlando, Florida
Aug. 2021 – May 2025

EXPERIENCE

Software Development Engineer Intern
Amazon.com, Inc.

Jun 2024 – Sept 2024
Austin, TX

- Created an internal tool that visually tracked the 300+ million daily safety decisions needed for storing products in Amazon warehouses.
- Analyzed the changes in service decisions over time to determine when exactly a specific product's storage classification changed.
- Leveraged 5 AWS services to analyze, display and bring context to any changes in decision-making by our service.
- Delivered 20+ extensive CI/CD integration and unit tests for the deployment of the project.
- Practiced Agile development in a seven person team through sprints and daily check-ins, and managed software versions with Git.

PROJECTS

Really Terrible Chess | *Java, TypeScript, Spring Boot, React, Gradle, Git*

Jun 2025 – Present

- Developed a website where users can play against each other in a custom version of classical chess.
- Users can create accounts and track their overall wins and losses, or play anonymously at any time.

Ladybug - Bug Localization | *Python, Java, JavaScript, Node.js, MongoDB, Git*

Aug 2024 – May 2025

- Worked on a six person team to enhance bug localization accuracy through a GitHub bot utilizing bug report and source code embeddings augmented with user interface data (novel approach), achieving a 10% relative improvement in bug finding.
- Streamlined developers' bug replication process by integrating Android emulators with bug recording and replication technology, capturing user interface data to generate enriched bug reports.
- Advanced research merit by experimenting with 5+ frontier LLMs, 100+ hours of experimentation run-time, resulting in a 15% increase from the previous methodology.
- Awarded a \$250 scholarship, Judge's choice award at Student Research Symposium, and college-wide showcase finalist.

VALORGG | *JavaScript, React, Node.js*

May 2023 – Jul 2023

- Developed a web application that allows Valorant players to track the game statistics of multiple players.
- Leveraged Riot Games' REST API to deliver statistics for a user's recent performance.
- Allowed 50+ users to find the recent game history of players in a specific match.

PUBLICATIONS

- Mahmud, J., Chen, J., Achille, T., Alvarez-Velez, C., Bansil, D. D., Ijeh, P., ... & Moran, K. (2025). LadyBug: A GitHub Bot for UI-Enhanced Bug Localization in Mobile Apps. arXiv preprint arXiv:2508.05085.

EVENTS

ShellHacks 2023
Miami, FL

Sept 2023

- Worked within a team of four to create Pedestria - a web application that displays the air quality and traffic along a chosen walking/biking path.
- Written in HTML/CSS and vanilla JavaScript.
- Leverages Google's Maps and Air Quality REST API platforms.

TECHNICAL SKILLS

Languages: Java, Python, PostgreSQL and MySQL, JavaScript/TypeScript, HTML/CSS

Frameworks: React, Node.js, Spring Boot, Mockito, Jest

Tools: Git, GitHub Actions, NGINX, Docker, AWS (IAM, S3, Lambda, Athena, CloudWatch), VS Code, MongoDB, IntelliJ, Eclipse, Microsoft Office, Windows, Linux

Libraries: pandas, NumPy, Matplotlib, PyTorch

Soft Skills: Leadership, Communication, Adaptable, Critical Thinking, Time Management, Self-Motivated
